

CLAIMS

I claim:

1. A wireless communication system, comprising:
a pattern of cells;
a base station; and
one or more user stations;
wherein said base and said user stations communicate using
time division multiple access;
wherein said base station is assigned a first transmission
frequency for transmitting to a first cell in said pattern of
cells, said first transmission frequency not being assigned to
any base station for transmitting to any cell in said pattern of
cells adjacent to said first cell;
wherein each user station in said first cell is assigned a
second transmission frequency for transmitting to said base
station for the respective first cell, said second transmission
frequency not being assigned to any user station in any cell in
said pattern of cells adjacent to said first cell.
2. A wireless communication system of claim 1, wherein
said first transmission frequency is from a first set comprised
of a limited first predetermined number of frequencies and
wherein said second transmission frequency is from a second set
comprised of a limited second predetermined number of
frequencies, whereby said first set of frequencies is different
than said second set of frequencies.
3. The wireless communication system of claim 2, wherein
said first predetermined number of frequencies is three and said
second predetermined number of frequencies is three.

4. The wireless communication system of claim 1, wherein said base station is dynamically assigned said first transmission frequency.

5. The wireless communication system of claim 1, wherein the user stations in said first cell are dynamically assigned said second transmission frequency.

6. The wireless communication system of claim 1, wherein transmissions between said base station transmitting to said first cell and the user stations in said first cell are time division duplexed.

7. A wireless communication system, comprising:
a pattern of cells;
one or more base stations; and
one or more user stations;
wherein said base stations and said user stations communicate using time division multiple access;
wherein a base station which transmits to a first cell in said pattern of cell is assigned a first transmission frequency for transmitting to said first cell, said first transmission frequency not being assigned to any base station for transmitting to any cell in said pattern of cells adjacent to said first cell;
wherein each user station in said first cell is assigned said first transmission frequency for transmitting to said base station which transmits to said first cell;
wherein the communication between said base station which transmits to said first cell and the user stations in said first cell are time division duplexed.

8. The wireless communication system of claim 7, wherein a user station in said first cell transmits data communication messages which include station identification information.

9. The wireless communication system of claim 7, wherein said base station which transmits to said first cell is dynamically assigned said first transmission frequency.

10. The wireless communication system of claim 7, wherein a user station is dynamically assigned said first transmission frequency when it enters said first cell.

11. The wireless communication system of claim 7, wherein said pattern of cells comprises a repeated pattern of cells consisting essentially of a first class of cells, a second class of cells, and a third class of cells, wherein no member of said first class of cells, no member of said second class of cells is adjacent to another member of said second class of cells, and no member of said third class of cells is adjacent to another member of said third class of cells.

✓ 12. A wireless communication system, comprising:

- a pattern of cells;
a base station; and
one or more user stations;

wherein said base station is assigned a first transmission frequency for transmitting to a first cell in said pattern of cells, said first transmission frequency not being assigned to any base station for transmitting to any cell in said pattern of cells adjacent said first cell;

wherein said user stations in said first cell are assigned a second transmission frequency, said second transmission

SUB
C1
frequency not assigned to any user stations in any cell in said pattern of cells adjacent said first cell;

wherein said base station is further assigned a first spread spectrum code for modulating radio communication for said first cell; and

wherein said user stations in said first cell are each assigned a second spread spectrum code for modulating radio communication from said first cell.

SUB
C1
13. The wireless communication system of claim 12, wherein said first transmission frequency is from a first set comprised of a limited first predetermined number of frequencies and wherein said second transmission frequency is from a second set comprised of a limited second predetermined number of frequencies.

14. The wireless communication system of claim 13, whereby the frequencies of said first set of frequencies are mutually exclusive of the frequencies of said second set of frequencies.

SUB
C1
15. The wireless communication system of claim 13, wherein said first predetermined number of frequencies is three and said second predetermined number of frequencies is three.

16. The wireless communication system of claim 12, wherein said base station is dynamically assigned said first transmission frequency.

17. The wireless communication system of claim 12, wherein a user station is dynamically assigned said second transmission frequency when it enters said first cell.

SUB
C1

18. The wireless communication system of claim 12, wherein each base station servicing said pattern of cells uses said first spread spectrum code for modulating radio communication for said pattern of cells uses said second spread spectrum code for modulating radio communications from said pattern of cells.

Sub
A1

19. The wireless communication system of claim 12, wherein said pattern of cells comprises a repeated pattern of cells consisting essentially of a first class of cells, a second class of cells, and a third class of cells, wherein no member of said first class of cells is adjacent to another member of said first class of cells, no member of second class of cells is adjacent to another member of said second class of cells and no member of said third class of cells is adjacent to another member of said third class of cells.

Sub
C1

20. The wireless communication system of claim 12, wherein said first spread spectrum code and said second spread spectrum code comprises a set of codes with minimal cross-correlation attributes.

21. A multiple user wireless communication system,
comprising:

Sub
B2

a plurality of cells;
a base station located in each cell;
wherein transmitters in a first cell are assigned a first
code for modulating radio communication in said first cell;
whereby radio signals used in said first cell are spread
across a bandwidth sufficiently wide that receivers in a second
cell, said second cell being adjacent to said first cell, may

54B
B2
distinguish communication which originates in said first cell
from communication which originates in said second cell;
whereby said first cell using said first code is not
adjacent to any other cell using said first code;
wherein said base station transmits over a first frequency;
and
wherein user stations in communication with said base
station transmit over a second frequency different from said
first frequency.

Sub
A2
22. The multiple user wireless communication system of
claim 17, wherein said base station communicates with said user
stations using time division duplexing.

✓ 23. A wireless communication system, comprising:
a plurality of cells;
a base station; and
a plurality of user stations;
wherein said base station is assigned a first transmission
frequency for transmitting to a first cell in said plurality of
cells, said first transmission frequency not being assigned to
any base station for transmitting to any cell in said plurality
of cells adjacent said first cell;

wherein said user stations in said first cell are assigned
a second transmission frequency, said second transmission
frequency not assigned to any user stations in any cell in said
plurality of cells adjacent said first cell;

wherein said base station and said user stations in said
first cell are assigned one or more distinct codes for
modulating radio communication for said first cell.

[illegible]

se station is assigned a first set of spreading codes for communicating with said first cell, said first set of one or more spreading codes not being assigned to any other user station communicating in any cell in said plurality of cells, said first cell, and wherein said user station is assigned a second set of one or more spreading codes, said second set of one or more distinct spreading codes assigned to any user stations in any cell adjacent said first cell.

10. The wireless communication system of claim 9, wherein said user station communicates with said user station using time division duplexing.
